ACKNOWLEDEMENT

We consider it our privilege to express a few works of gratitude and take this opportunity to do so. We wish to express our hearty thanks to everyone who helped for completing this minor project.

We are deeply indebted to our worthy **Prof: Dr Sasikumar.N** (Principal, UIT, Mukhathala) for the facilities generously provided with us to enabling in completing the minor project to our satisfaction.

Also we offer our sincere thanks to our project guide **Mrs.Norin Priya**.V Lecturer of computer science for this kind help and valuable suggestions accomplishing this project.

We wish to thank to lab instructor, teaching staffs and non teaching staffs of UIT, Mukhathala., Kollam for their splendid help for our project. Again we owe much to our friends for their co-operation and suggestion we are also thankful to all who helped us directly or indirectly in completing this minor project.

Finally, we express our gratitude to our beloved parents and all other members our family individually and collectively for their kind co-operation, encouragement which has substantially contributed towards making this project a brilliant success. Above all, we thank God Almighty for the help with this project work.

ABSTRACT

A basic website which helps those who are needy for blood to easily collect information's and contact those who are willing donate.

This project is aimed to developing an online Blood Donation Information. The entire project has been developed keeping in view of the distributed client server computing technology, in mind. The Blood Donation Agent is to create an information about the donor and organization that are related to donating the blood. Through this application any person who is interested in donating the blood can register himself in the same way if any organization wants to register itself with this site that can also register. moreover, if any general consumer ants to make request blood online, he can also take the help of this site. Admin is the main authority who can do addition, deletion, and modification if required.

The project has been planned to be having the view of distributed architecture, with centralized storage of the database. The application for the storage of the data has been planned using My-SQL and all the user interfaces have been designed using Python.
